000 such provisional unions are unnecessary. Moreover, professional
548 prostitution is for this reason virtually unknown in Urundi (see
also p. 218). I do not know whether the Barundi have "women's
575 clubs" with an organization of their own; in any case, there are
no special women's houses.

2. Birth, Childhood, Puberty, Death

163 As far as the Bahutu are concerned, the Barundi are a
people with a high birthrate. This is less true of the Batussi,
probably as a result of the long period of inbreeding. The more
842 children there are in a family, the greater is the work force
available to the parents and the better are the prospects of
obtaining a good purchase price for the girls who are to be
[832] married. Husband and wife occasionally take aphrodisiacs of
herb juices in order to increase fecundity (No. 19, p. 359).
As soon as the wife has conceived, the medicine man (umufumu)
843 is called. He gives her amulets to protect the embryo from
751 evil spirits. The amulets are worn over the abdomen which is
particularly in need of protection. For the same purpose the
husband occasionally blows tobacco smoke at his wife.

Whenever the results of conception are to be avoided,
847 either for the convenience of the women or in order to remove
the results of illicit intercourse, artificial abortion (kukorora) is
induced by intensive massage and by taking certain infusions
made of herbs. The use of these methods is a kind of secret
science among the women, and the men do not appear to have
any knowledge of it. The application of these methods is con-
[673] sidered a criminal offense and is punished [110] by the head
man or the chief (No. 19, p. 62). On the other hand, in
Ussumbwa and Unjamwesi abortion by means of herbal decoctions
is extremely widespread. "It is the goal of Barundi couples to
854 have as many children as possible. One frequently sees fathers
tending, carrying, and feeding their children in Urundi but
000 never in Ussumbwa or in Unjamwesi. Barrenness (ingumba) is

845 of the hut to the accompaniment of rattles. These dances last
535 from four to six hours and induce real frenzy in the dancers. They form a circle, jump and contort their bodies bathed in perspiration, and sing rhythmical songs of short stanzas. A circle dance of the girls follows. They are painted and are adorned with leaves. In the meantime large amounts of beer are consumed. The celebration continues in this manner for two or three nights and even longer. In the end the priest once
845 more performs the great ceremony of the holy spear, and two
782 little lambs are dedicated to the god as substitutes for the twins. The lambs may not be slaughtered and are allowed to run around freely and eat whatever and wherever they desire. However, the dances and the drinking bouts often continue for two or three weeks longer (No. 19, p. 325; No. 45, 1914, p. 315).

847 Infanticide (kumuniga umwana) is rare among the Barundi, but it does occur, mainly because the mother wishes to avoid the tedious work of bringing up and feeding the baby. Nominally this is regarded as a punishable crime, but the offender is rarely punished since it is difficult to prove intent to kill (by suffocation). An infant is legally killed by the medicine man if it is
[826] born with teeth or if its upper incisors grow first (No. 4, p. 221).
[171] This is also reported by Lechaptois from the southernmost Bahima state, Ufipa (No. 47, p. 138). The Batwa, too, kill such infants.

553 As soon as the child's hair begins to grow or as soon as it is able to walk, it is given a name (isina) by the father. The mother and friends add still other names, so each Murundi has at least two or three names. No special celebration is connected with the naming of the child. There are a great variety of
551 names. They either indicate particular characteristics of the child or refer to certain events in its young life, or they result from some whim of the name-giver, for example: kitwe, thick-head; mbiriko, wood chip; ntarija, it does not cry; kimina, it walks upright; kiriwate, cattle hide; manwa, big mouth; mawamba, orphan; yamirwa, beer; inambu, hunger; tunguru, name of a bird. There are other, ugly Barundi names which

681 to birds and animals such as buffalo, gazelles, wild boars, dogs.
696 Even if the latter should not die immediately, their masters would
823 have to kill them for fear of being stricken themselves by contagion.

Each night, they say, smoke and flames rise from that awful place and cast a reddish glare on the horizon (1).

1. The grass fires at the end of summer must not be foreign to this association of thoughts and images.

It is also said that the waters have the color of blood (atukura, assa n'amarasso). Every time an offender is led to the pit, the waters rise suddenly as though to fetch the victim (ngw' abon' umugome, akassama). After swallowing their prey, the waters subside. Then protracted cries and moans (akaboroga, akater' induru) arise from the bottom of the pit.

The pit is so deep, it is commonly said, that its waters join those of Lake Kivu (ngw' aja hasi, afatanye n'i Kivu).

Considering such stories, one can easily understand why people should speak with terror of that cursed place.

681 In actual fact, the victims were strangled or killed with spears
696 before they were thrown into the water.

An attempt was made to submerge the bodies, but they would rise once more to the surface. The hyenas quickly disposed of them. After leaving the place of torture, the executioners would go a certain distance to another depression, usually filled with water, in order to clean their weapons and wash their blood-stained hands. /384/

[848] Traitors and enemies, bewitchers and ranking political
[845] prisoners were not the sole victims of the accursed pit. Among those
[847] condemned to die at that sinister spot were also freak babies (ibimara),
[826] unwed mothers (ibinyandaro), children born during the period of mourning held for their father (inda y'amabi) sometimes along with their mother, young girls whose breasts had not grown (impenebere) (1). . . , and calves born in a "faulty" manner (ubufuti), such as those whose legs . . came first.

754 and cite numerous examples to this effect. On the other hand, the ingredients used in their manufacture are not yet sufficiently known.

754 278 At best, one hears popular rumors of snakes, toads, human cadavers (imirundi y' abapfuye, n' ingobyi z' abana), crocodiles, etc., whose putrefied flesh was used. The Blacks are also convinced that the lungs of tuberculars are used to transmit the disease to other [164] people (1).

1: This illness is widespread among the Batutsi, who greatly fear it.

They know full well that it is fatal. Hence their great [578] curse, "May you die of tuberculosis!" (uragichwa n' igituntu).

According to popular belief, those lungs are dried out and crushed to powder so as to be slipped more easily into the drinking tube which is used to drink native beer. Menstrual blood (irungu), [84] which inspires in them an intense fear and an acute aversion, is popularly believed to cause slow poisoning when administered to an enemy. It is mixed in with his food secretly. There is also mention of poisonous juices, such as the milk of various kinds of euphorbia [824 847] (imiyenzi, imiduha, etc.) and of certain other plants, for example, muhoko, which is also used to induce abortions. Cactus milk and muhoko juice could only induce death in such quantities that the person involved would not fail to detect them while drinking. It is difficult, therefore, to make frequent use of those substances.

278 824 The Banyarwanda also regard as toxic /488/ the following plants: urwizilinga, umutambasha, and igisura. As we mentioned earlier, urwizilinga is a shrub somewhat similar to datura. It is the plant whose juice or powdered bark is used in trials by ordeal. The umutambasha is another shrub whose leaves are crushed to extract [224] the juice. The Banyarwanda use it to kill rats by mixing it with the food that is used as bait for those rodents.

322 412 The tools used for this work are the ax (Figs. 29, 30), the bush knife (Fig. 31), the percussion drill, the hollow hatchet in various sizes with diagonal cutting edges, and the rasp for scraping the interior and surface of objects.

325 316 439 Metal Industry. The two types of metalwork in Ruanda are the ordinary blacksmith's art and wire drawing. Iron mining is of no importance; the inhabitants are dependent almost entirely on imported metal. Iron is imported from Busindja and from the Congo state in the form of hoes. I saw a few abandoned mines on Mount Ndisa, and there is some iron in Kissaka. Dr. Kandt (1) even reports a blast furnace with 16 bellows. Bgisha

1. Ibid., p. 360.

is said to be considerably richer in iron, but it seems to me that it chiefly mediates the importation of Congo iron.

326 The smiths form a sort of guild in Nduga. They are all Bahutu, but they belong to different clans even though their occupation is generally hereditary.

Smiths are very much feared throughout the country, although one cannot deny that their trade is regarded with a certain scorn. Among the Bahutu the smiths enjoy their wealth because of an undeniable influence. Women, for example, seem to regard smiths as great cavaliers and men of the world who always drink beer to excess. In general, however, they are regarded as restless spirits and eternal rebels, nor are they especially praised for their honesty. In view of this, they are carefully watched at their work when, as is usually the case, they are furnished with raw materials by the customers. It is said that they filch iron whenever they can and have a very bad reputation in this respect.

[847] Aside from their regular trade, the smiths also practice gynecology, and they are noted for their skill in performing abortions. They also play a prominent part in the cult. The head of the royal smiths is said to have a high position and to play an important role in court ceremonies.

551 are often so long that they can barely be pronounced in one breath, and yet they are always spoken very fast, in one breath, with a singing intonation and with a dance gesture."

842 If a widow gives birth to a child, they say that the child has
843 remained in her blood since the death of her husband and that it
164 has only now come into the world. This belief is related to the idea that pregnancies can last several years, and that idea, in turn, probably comes from the diseases of the genital organs (tumors) that cause enlargement of the abdomen. If [230] a woman can be pregnant for several years, she also can carry the child in her blood for several years.

845 Children are ardently desired and loved. In the southeast, in
847 Kissaka, twins are regarded as a blessing; the mother gets twice as many presents and is called nina babili. However, in the northwest, in the Forest Bantu sphere of influence, this is very different. Here infanticide is not uncommon and is practiced particularly on twins. During my visit in Mulera twins were born near the Ruasa Mission. The missionaries had a hard time preventing the people from killing the children. At first the natives replied to the missionaries' explanations that a woman could not possibly carry two children on her back.

853 Children are nursed for a long time, for three years it seems. One sees cases of children who come to their mothers to suck when they are old enough to run about and even to tend cattle.

[854] Little attention is paid to children. This is evident in the
861 high infant mortality. Even less care is given to the moral education of children. Although they are not thrashed like European children, they sometimes suffer severe punishment, especially for theft. A popular punishment is burning the fingers, which is supposed to bring about inhibitory associations when one reaches for other people's belongings. The hands of the little thieves are bound with blades of grass or scraps of matting, which are lighted, and the fingers are covered with burns (1).

1. Classe, Father, Moeurs et Coutumes des Bagoye [Manners and Customs of the Bagoye] (Les Missions Catholiques, 1905), p. 428.

842 It is obvious that if a large number of children brings the father influence and possessions and insures the existence of the whole group, there is no reason for the use of devices which limit the number of children. However, contraceptives are known. Father Schumacher (2) says: "The juice of the muhoko bush,

2. Schumacher, Father P., "Die Ehe in Ruanda," Anthropos, 1910, p. 894.

mixed with a small amount of water, is taken as a contraceptive; strong doses are taken to commit suicide. As a superstitious but 'infallible' remedy, the mother who wishes to prevent her daughter's disgrace uses the latter's first menstrual blood. She catches this and allows it to dry on any kind of material. She keeps it, or, for example, she may tie the rag on her foot (the numerous butega hide it). After this is done, conception is impossible, no matter what the girl manages to do."

847 If a nursing mother becomes pregnant, she has an abortion out of consideration for the child. The operation is performed by a smith and is said to be done mechanically and not with internal remedies.

[231] The same thing happens when an unmarried girl becomes pregnant. If the abortion is unsuccessful and the girl has the child, it is often killed by being allowed to starve.

764 Death. If a person dies in a house, the nearest relatives are assembled, and a pole is provided on which the body is tied when it is transported to the grave. The body must not be kept very long in the hut.

The women mourn the deceased, and all clothing, bracelets, and leg rings are removed from the corpse. The body is put in a crouching position with arms and legs bent, rubbed with butter, and wrapped in mats (virago) with no gifts added. Moreover, the Batutsi shave the head of the body, but the Bahutu do not do this.

In Kissaka the deceased is either buried in the banana grove or thrown into a papyrus swamp, according to his wishes. In Nduga bodies are usually thrown into the swamps. In places where there are no papyrus swamps, they are covered with a layer of earth. In Mulera it is a common custom to bury the Bahutu. The

woman's divorce was not yet completely settled (i.e. if the exchange of marriage-gifts and counter-gifts had not taken place), the former husband was still regarded as a pater of the child and the genitor had to pay him the child-wealth, if he wanted to have the child.

My male informants affirmed not to know of any contraceptives and they did not think that women knew better. In Ruanda culture, they would probably have been used exclusively for premarital relations. One informant, however, stressed the fact that too many pregnancies were bad for very poor people not having enough cow-milk and goat-milk to give to their babies, who then often died from malnutrition or from intestinal diseases (goat-milk was regarded as vermifugal). A certain herb called *umuhoko* was known for its abortive effects and used sometimes by pregnant unmarried girls with the help of their mother.

(*d*) *Socialization*

The young Ruanda spent the first years of his life in his mother's compound. There the first stages of the long process of his socialization, which was completed only after he had achieved marriage and parenthood, took place.

In matters of education, as in others, the supreme authority in the compound was the father. The paternal uncle could discipline his nephews and nieces only when they were in his compound or when the father was not present. His role was that of a substitute for the father. The maternal uncle had no authority except where the bride-wealth had not been paid. The mother had no authority of her own and had to be backed up by the father. It is clear, however, that in everyday life and particularly when the children were young, the mother was a disciplinarian and the main agent of socialization.

The training for the different activities expected to be mastered by any member of his caste began early for the child. From weaning (when they were about two years old) to the age of five, children were supposed to be clean, quiet, and not to wander far from the compound. Not later than five years old, children began to collect wood, to carry water, to watch goats and calves. A ten-year-old boy was taught how to handle a hoe and worked with his father in the fields. A girl learned how to light a fire, to brush, and to carry out the household duties of a woman. Boys from twelve to

Women of Burundi: A Study of Social Values

Many children represent happiness for both men and women in Burundi. Women adore babies, and a pregnant Rundikazi is a happy woman. Only very rarely do women go into the bush to look for the medicines that cause miscarriage. (For unwed mothers, the motivation is obviously different). It is not possible to find a Rundikazi, even a great-grandmother, who will admit that she is *umukechuru*, a woman beyond the age of child-bearing. A woman who is sterile, or who has had only one child and never again conceived believes that she has been cursed by her paternal aunt or is the victim of witchcraft. Some women produce Gargantuas, children they have carried for 11 months, or 15 months or even two years. The Rundi are by no means ignorant of the biological cause and signs of pregnancy.[16] They simply refuse to acknowledge any other alternative conditions than pregnancy or nursing mother. It is also not for a lack of knowledge of the biological facts that men have no interest in the biological paternity of their children. If a brother or cousin is the biological father, this is no more than is to be expected. If it is a stranger who has got his wife with child, he has made the husband a free gift. The father does not reproach his wife if she has conceived during one of his long absences from home, nor is he at all prejudiced against those of his children who have been fathered by other men, when the time comes to choose his heritor.[17]

Among the princes and the Tutsi of the very good patrilineages, the mother does not take care of the children except to nurse them. A governess, a woman from a family only slightly lower in the social scale than that of the child, looks after it. At present, the wealthy send their school-age children to European schools far from home. In the past, young adolescents were sent to be brought up by princes and princesses. Among the commoners, an infant is with its mother day and night. He is carried nude on her naked back and nursed at the first whimper. The mother plays with her baby, especially with her son, tickles it everywhere, and talks baby talk to it. She adores her baby, but the moment she finds herself pregnant again, she immediately weans her child. The child, who is probably between 18 and 24 months old, is abruptly separated from his mother. He is handed over to a brother, a sister, a grandmother, to anyone who will have him. Sometimes, the grandmother or a grown-up sister will permit a newly-weaned child to suck at the dry breast, but soon the child is put on the ground to crawl about, to play, and to learn that life is hard. It is not surprising that the mortality rate of newly-weaned children is very high.

If there has been a divorce, the departing wife takes with her
